hard requirement PPT

→ Maths for ML

T - T → Professor

S → Mathematics

Doubt session

+

Maths

+

codin

Part A: ML + DL Intro - 15

1. ML Fundamentals, build your first simple ML model.
2. Deep Learning Basics
3. Deep Learning for Images
4. Deep Learning for Text
5. LLMs as part of DL Models

Optimization 1 - The need for calculus in ML

Optimization 2 - Towards gradient descent

Optimization 3 - Gradient descent in action

Data ML And Foundation —3

Part B: GEN AI Engineering - 17 lec (Me)

1. What LLMs are?
2. How to use OpenAI API for communicating/talking to these language models.
3. Multiple Modalities
4. Embeddings - RAG
5. Building end to end Support CHATBOT (using these APIs)
6. Eval/Testing of these GEN AI Applications
7. LangChain, Langfuse, Langgraph (llamaindex)
8. Production concepts: Caching, batching, and reliability.
9. Fine-Tuning Language Models.
10. MCP Protocol, MCP Client, MCP Server
11. AI Agent vs Agentic AI
12. Productivity Work-flows, Copilot, Claudecode
13. Multi Agents Orchestration
14. Deploying these kind of AI Agents

Aman Singh

To Everyone

12:25 PM

So, if we already know Python, we don't have to watch the recordings, right? Watching the recordings isn't a requirement, is it?

Venkaresh

To Everyone

12:25 PM

Mcp. A2A, memory agents are covered ?

Rahul Choudhury

To Everyone

12:26 PM

Aman in case you are already aware of Python, you can skip watching the recordings.

Debashish jena

Will this course start by covering the basics as the prerequisite that has been given would take time to complete and understand

Start Doubt Session

If the goal is to become good in finetuning / Production RAG system builder,
Also will it give an idea of what models to use in which kind of applications we're building?
My point is -- claude can already build a lot of it, but having understanding of what its building and take good architectural decisions is imp. is that covered ?

What you should expect

1. Understanding of AI/ML foundation
2. How to build production ready AI Application
3. How to integrate GEN AI into currently existng application.

What you should NOT expect:

1. You will be ready for ML research roles.
2. Trainings complete LLMs from scratch

gpt-4o costed about 65 million dollars to train.

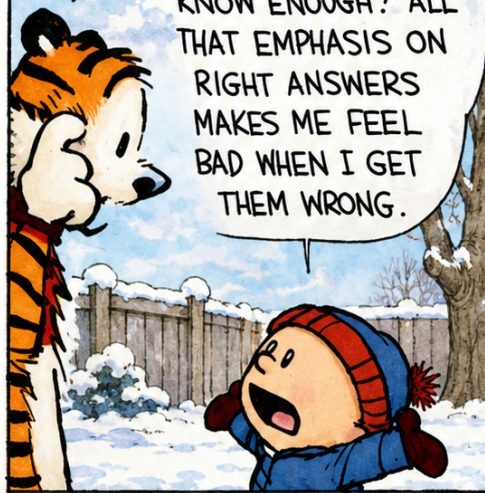

AREN'T YOU SUPPOSED TO BE DOING HOMEWORK NOW?

I QUIT DOING HOMEWORK. HOMEWORK IS BAD FOR MY SELF-ESTEEM.

IT IS?

SURE! IT SENDS THE MESSAGE THAT I DON'T KNOW ENOUGH! ALL THAT EMPHASIS ON RIGHT ANSWERS MAKES ME FEEL BAD WHEN I GET THEM WRONG.

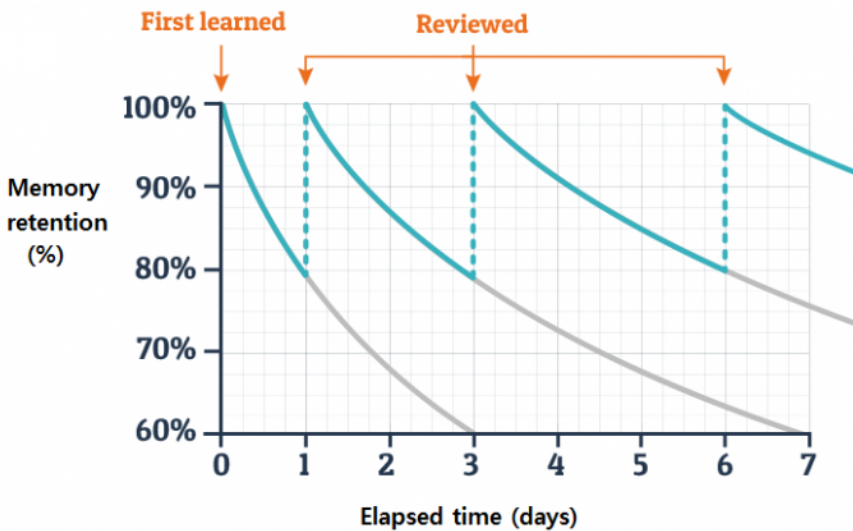

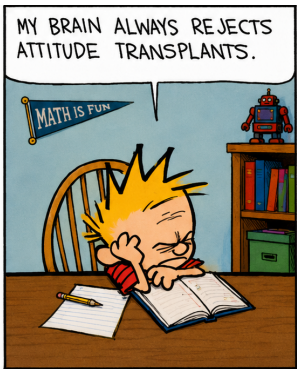

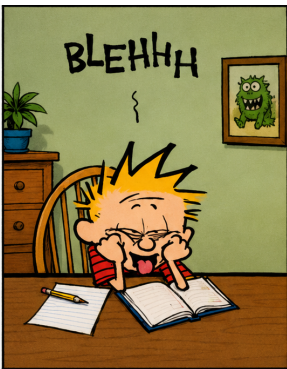

SO INSTEAD OF TRYING TO LEARN, I'M JUST CONCENTRATING ON LIKING MYSELF THE WAY I AM.

YOUR SELF-ESTEEM IS ENHANCED BY REMAINING AN IGNORAMUS?

PLEASE! LET'S CALL IT "INFORMATIONALLY IMPAIRED."

SDE, Gen-AI Engineer, Data Engineer, AIML Engineer

SDE: Builds products/systems/microservices (APIs, services, reliability) Core Requirement: DSA, System-design, Testing, Cloud-infra.

Gen-AI Engineer: build LLM features inside apps (RAGs, Agents, prompt-engineering, evaluating GEN AI architectures, guard-rails, costs-latency), Data Basics (numpy-panda).

Data Engineer: builds data platforms/ware-houses. Connects websites/apps to database. (Ingestions, ETL/Workflow, managing data work-houses)

AIML Engineer: build ML models + deployment (in some aspects), we also work on (model-training, Feature-engineering, model-servings, MLOPs (in some capacity). GENAI is typically a subset of AIML Engineer.

Career Transitions:

- 1. SDE -> GENAI Engineer (this course + data handling) + AI -> AIML Engineer
- 2. Data Engineer -> AI + GENAI -> AIML Engineer.

- AI:
- 1. Recommendation
 - 2. Clustering
 - 3. Prediction (numerical-value, or some category)
 - 4. Time-series Forecasting
 - 5. RL
